i The phone images throughout this document are representative interface mockups of the live application, provided to illustrate each screen and the actions each role performs.

The **Aaravam 2026 Onam Sadhya Ticketing System** is a mobile-first web application that manages the complete lifecycle of feast (Sadhya) ticketing — from door-to-door booking of residents, through payment collection, to validated serving of plates at the dining hall. It is designed for phones, so volunteers and validators operate entirely from their mobile browsers.

What the system solves

- **Accurate headcount & revenue** — every plate booked, paid and served is recorded against a specific residence (Wing + Unit).
- **Separate pricing** for Adults and Kids, with automatic totalling.
- **Payment tracking** — amount paid, balance due, and which account the money was collected into.
- **Fraud-proof serving** — a QR/secret code per booking; plates cannot be over-served, and every serving is time-stamped.
- **Full auditability** — booking edits and check-ins are logged for post-event reconciliation.

Three user roles

ROLE	WHO	PRIMARY PURPOSE
ADMIN	Event organisers	Configure the event, manage staff, monitor collections & serving, run reports.
AGENT	Field volunteers	Book families door-to-door, collect payment, issue tickets, edit bookings.
VALIDATOR	Dining-hall staff	Scan/verify tickets and mark Adult/Kid plates as served.

Technology & hosting

ASPECT	DETAIL
Front-end	Mobile-first responsive web (HTML/CSS/JS), Onam "Kasavu" theme
Back-end	Core PHP with PDO prepared statements (SQL-injection safe)
Database	MySQL — residents, bookings, consumption, agents, validators, settings, audit logs
Hosting	Standard cPanel shared hosting; HTTPS required for camera QR scanning
Time zone	All timestamps displayed in India Standard Time (IST)

The table below is the authoritative "who does what" reference. Each capability is owned by exactly one primary role; the Admin can additionally act as a Validator when needed.

CAPABILITY	ADMIN	AGENT	VALIDATOR
Set event name, date, venue	✓	—	—
Set Adult & Kids price per plate	✓	—	—
Create / activate / deactivate Agents	✓	—	—
Create / activate / deactivate Validators	✓	—	—
Book a family (Wing + Unit, plates, payment)	✓	✓	—
Edit a booking (owner, contact, plates, paid, "Paid To")	✓	✓	—
Issue VIP / Ad-hoc ticket (non-resident)	✓	—	—
Scan QR / look up by code or Wing+Door	✓	—	✓
Serve Adult / Kid plates	✓	—	✓
View dashboard, reports, collections by account	✓	—	—
View booking edit audit log	✓	—	—
Export data to CSV	✓	—	—

Responsibility summary

ROLE	OWNS	ACCOUNTABLE FOR
ADMIN	Configuration, staff accounts, oversight, reporting	Correct pricing, staff onboarding, end-of-event reconciliation
AGENT	Door-to-door bookings & payment collection	Accurate resident details, plate counts, and cash handed to the right account
VALIDATOR	Dining-hall check-in	Serving only the entitled number of Adult/Kid plates per booking

 **Separation of duties:** Agents handle money and data entry in the field; Validators only consume entitlements at the venue; Admins never need to be in the field but retain full visibility and control.

Actors (left/right) and the use cases (ellipses) each can perform. The Family/Resident is an external actor who receives a ticket and presents it at the venue.

i Gold ellipses = Admin-only, green = Agent (and Admin), blue = Validator (and Admin). The Family actor triggers "Generate ticket" (receives it) and presents it for "Serve plates".

The lifecycle of a Sadhya ticket across the three roles, from event setup to a served plate.

Workflow narrative

- Setup (Admin):** configure the event, set Adult/Kids prices, and create Agent & Validator accounts.
- Residents loaded:** the Wing/Unit/Name master list is seeded once, so agents pick real residences.
- Booking (Agent):** select Wing + Unit (name auto-fills), enter Adult/Kid plates, record amount paid and "Paid To" account.
- Ticket:** the system issues a unique QR and secret code (e.g. `6107-482`).
- Delivery:** the agent shares the ticket with the family via WhatsApp/SMS or print.
- Check-in (Validator):** at the venue, scan the QR, type the code, or select Wing + Door.
- Serving:** the validator serves the exact number of Adult and Kid plates; the counts reduce precisely and cannot be exceeded.
- Oversight (Admin):** throughout, the admin monitors bookings, collections by account, and the check-in log.

The Admin signs in with a username and password and lands on the Dashboard. The top navigation gives access to Dashboard · Agents · Validators · Tickets · Reports · Edit Logs · Settings.

Dashboard — live counts of bookings, plates, collections & pending dues.

Agents — add volunteers with a personal PIN; activate/deactivate anytime.

Validators — individual PIN accounts; admin can enter validator mode directly.

What the Admin does

SCREEN	ACTION
Settings	Set event name/date/venue; set Adult & Kids price per plate; change admin password.
Agents	Add each volunteer with a unique PIN; view their bookings & revenue; deactivate when done.
Validators	Add each check-in staff with a unique PIN; view plates served; enter Validator Mode directly.
Tickets	View all bookings; issue VIP / Ad-hoc tickets for non-residents.
Reports	Filter bookings; see Collections by Account; export CSV.
Edit Logs	Review every change made to any booking (who, when, before → after).

Reports

Collections by account

Account	Bookings	Collected
Deepaklal	44	₹31,000
Naveen	33	₹22,500
Arun Vishnu	29	₹18,000
Total		₹71,500

Export CSV

Settings — separate Adult and Kids price per plate.

Ad-hoc — issue a valid ticket to a VIP / walk-in not in the resident list.

Reports — money collected per "Paid To" account, plus CSV export.

 **Reconciliation made easy:** "Collections by Account" tells the treasurer exactly how much cash each collector (Deepaklal / Naveen / Arun Vishnu) is responsible for handing over.

Edit audit log

Whenever an agent edits a booking (owner, contact, plate counts, amount paid, or "Paid To"), the change is recorded with the editor's name, timestamp, and the exact before → after values. Admin reviews this under **Edit Logs** for dispute resolution and audit.

TIME (IST)	ORDER	EDITED BY	CHANGE
12 Sep, 10:42:07	ARV3F4A2	Naveen	Paid Amount: ₹300 → ₹500; Paid To: Naveen → Arun Vishnu
12 Sep, 11:05:19	ARV77Q1B	Deepaklal	Adult Plates: 3 → 4

Agents (field volunteers) log in with a personal PIN and book families door-to-door directly from their phone. The booking page has two tabs: **New Booking** and **Edit Booking**.

The Login screen features a header with a key icon and the title "Login" above the subtitle "Agent PIN". Below this is a row of three tabs: "Admin", "Validator", and "Agent" (which is highlighted). Under the "Agent" tab, there is a label "Agent PIN" followed by a text input field containing four dots. At the bottom is a large orange button labeled "Start Booking".

Login — the agent taps the Agent tab and enters their PIN.

The New Booking screen has a header with a house icon and the title "New Booking" above the subtitle "Agent: Naveen". It features two tabs: "New" (active) and "Edit". The form includes: "Block No." (WING 6) and "Unit" (107) dropdowns; a "Name" field (Deepaklal); a "Contact" field (98765 43210); "Adults" (3) and "Kids" (2) input fields; "Total" (₹800) and "Paid" (500) input fields; "Balance" (₹300) and "Paid To *" (Naveen) input fields. At the bottom is a large orange button with a checkmark icon labeled "Confirm & Generate".

Booking — Wing+Unit auto-fills the Name; Adult/Kid plates priced separately; payment & "Paid To" captured.

The Ticket Confirmed screen has a header with a ticket icon and the title "Ticket Confirmed" above the subtitle "Order ARV3F4A2". It displays a table with booking details: Block/Unit (WING 6 - 107), Plates (3 adult, 2 kid), Amount (₹800), Paid / Bal (₹500 / ₹300), and Paid To (Naveen). Below the table is a large orange button with a key icon labeled "Secret Code" and the code "6107-482". Underneath is a QR code. At the bottom are "Share" and "Print" buttons.

Ticket — QR + secret code, shareable to the family via WhatsApp.

How an agent books a family

1. Log in with your PIN → **New Booking**.
2. Select **Block Number (Wing)** then **Unit** — the resident's **Name** auto-fills (editable).
3. Confirm the contact number.
4. Enter **Adults** and **Kids** plate counts — the total calculates automatically.
5. Enter **Amount Paid**. If any amount is paid, choose the **Paid To** account (Deepaklal / Naveen / Arun Vishnu). If nothing is paid, "Paid To" is optional.
6. Tap **Confirm & Generate Ticket**, then **Share** it to the family.

Editing later: the *Edit Booking* tab lets an agent update owner name, contact, plate counts, amount paid and "Paid To" for any Wing+Unit. Every edit is logged for the admin.

Save Changes

Step 2 — update fields; all changes are audit-logged.

Guard rails: plate counts can never be reduced below the number already served at the venue, and a duplicate booking for the same Wing+Unit is prevented — the agent is directed to edit the existing one instead.

Agent quick rules

SITUATION	WHAT TO DO
Family pays partially	Enter the paid amount; balance is shown; select "Paid To".
Family pays nothing yet	Leave Paid = 0; "Paid To" is not required.
Wrong plate count entered	Use the Edit tab to correct it (logged automatically).
Unit already booked	System blocks a duplicate — edit the existing booking instead.

Validators are stationed at the dining-hall entrance. Each logs in with a personal PIN and verifies every family's ticket before serving. There are three ways to find a booking: **Scan QR**, **Manual code**, or **Wing / Door**.

How a validator serves a family

1. Log in with your Validator PIN.
2. Find the booking by **Scan QR**, **Manual code** (e.g. `6107-482`, with or without the hyphen), or **Wing + Door**.
3. The booking card shows plates remaining and the payment status.
4. In **Serve Plates**, use the + / – steppers to set the number of **Adults** and **Kids** being served now (capped at what remains for each).
5. Tap **Confirm & Serve** — the remaining counts update instantly.

⚠ **Over-serving is blocked.** If all plates are already served, a red **LIMIT REACHED** alert appears with the full serving history — the validator must not serve more and should direct the family to the coordinator.

Validator scenarios

SCENARIO	SYSTEM RESPONSE	ACTION
Valid code, plates remaining	Green card with Adult/Kid steppers	Serve the number present
Partially served earlier	Shows remaining per type	Serve only the remaining
All plates used	Red LIMIT REACHED + history	Do not serve; refer to coordinator
Tried to serve more than remaining	Blocked with a clear message	Reduce the count to what remains
Unknown code	"No booking found"	Try Wing+Door or ask admin

📋 Every served plate is stored with the person type (Adult/Kid), an IST timestamp, and the validator's name — all visible to the admin in **Reports** → **Check-in Log**.

How money is tracked

- **Total billed** = Adults × Adult price + Kids × Kids price, computed automatically per booking.
- **Amount paid** is recorded by the agent at booking (and can be updated via edit).
- **Balance due** = billed – paid, shown on the ticket and in all admin views.
- **Paid To** attributes each collected amount to a specific account (Deepaklal / Naveen / Arun Vishnu). It is required only when an amount is actually paid.

Where the admin sees payments

VIEW	PAYMENT INFORMATION SHOWN
Dashboard	Total billed, amount collected, payment pending (headline figures)
Tickets	Per booking: amount, paid, balance, and "Paid To" account
Reports → Detailed	Same per-booking columns, filterable by account, with totals row
Reports → Collections by Account	Bookings count & amount collected per account, plus grand total
CSV export	All of the above for offline reconciliation in Excel

Reconciliation flow (end of event)

1. Open **Reports** → **Collections by Account** to see how much each collector owes.
2. Cross-check the **pending** figure on the Dashboard against expected dues.
3. Export CSV and hand it to the treasurer; each collector settles their attributed amount.
4. Use **Edit Logs** to explain any post-booking changes to paid amounts or accounts.

 Because "Paid To" is captured at the point of collection and every change is logged, the committee can reconcile cash to the exact rupee, per person responsible.

Secret code format

Each booking gets a unique code of the form **{Wing Number}{Door Number}--{3 random digits}**, e.g. **6107-482**. The hyphen makes it easy to read and recall (helpful for elderly members and children). The QR encodes the same code, and manual entry works **with or without** the hyphen.

WING / DOOR	EXAMPLE CODE
Wing 6 / 107	6107-482
Wing 7 / 216	7216-903
Wing 1 / 001 A	1001A-539

Event-day checklist

OWNER	CHECKLIST ITEM
Admin	Adult & Kids prices confirmed; event details set
Admin	All agents & validators created with PINs and active
Admin	Resident (Wing/Unit) list loaded
Agent	Phone charged; booking page bookmarked; test booking done
Agent	"Paid To" account confirmed for cash handling
Validator	Logged in with personal PIN; camera permission granted (HTTPS)
Validator	Knows Manual & Wing/Door fallback if QR won't scan

Glossary

TERM	MEANING
Wing / Block	Residential tower (WING 1 ... WING 8)
Unit / Door	Apartment number within a wing (e.g. 107, 001 A)
Consumption	A served plate record (Adult or Kid) against a booking
Ad-hoc / VIP	Ticket for a non-resident guest, issued by admin
Paid To	The account/person the payment was collected into
